

Custom metal nameplates provide permanent visible identification of products. Available with or without mounting holes or pressure-sensitive adhesive backing.

## Anodized Aluminum Nameplates

The aluminum is chemically treated which allows the colour and design to be permanently captured and sealed beneath the anodic layer of the plate. **This process is available for aluminum only.** This plate weather resistant, resists solvents, gasoline, will not peel, chip, flake off or crack regardless of age; making it ideal for indoor/outdoor applications.

### Material:

Aluminum – Available in a wide variety of colour choices. Just Ask!!

## Etched & Filled Nameplates

Surface is chemically etched – colour design is then embedded into plate. The plate is then chemical filled and baked which provides greater visibility in dirty environments. Resists weather, solvents, corrosion, will not crack peel or chip regardless of age. Ideal for indoor / outdoor applications.

### Material(s):

- stainless steel
- brass
- aluminum
- copper

This process allows for a variety of colour choices or colour matching. Just Ask!

## How to Order:

- Size of plates
- Material thickness
- Round or square corners
- Number of colours
- Holes or adhesive
- Quantity required
- Artwork (provided or our design)
